Delivery of acid sphingomyelinase in normal and niemann-pick disease mice using intercellular adhesion molecule-1-targeted polymer nanocarriers.
| **Title** | Delivery of acid sphingomyelinase in normal and niemann-pick disease mice using intercellular adhesion molecule-1-targeted polymer nanocarriers. |
| **Publication Type** | Journal Article |
| **Year of Publication** | 2008 |
| **Authors** | Garnacho, C, Dhami, R, Simone, E, Dziubla, T, Leferovich, J, Schuchman, EH, Muzykantov, V |
| **Journal** | J Pharmacol Exp Ther |
| **Volume** | 325 |
| **Issue** | 2 |
| **Pagination** | 400-8 |
| **Date Published** | 2008 May |
| **ISSN** | 1521-0103 |
| **Keywords** | Abdominal Muscles, Animals, Drug Carriers, Endothelium, Vascular, Intercellular Adhesion Molecule-1 |
| **Abstract** | Type B Niemann-Pick disease (NPD) is a multiorgan system disorder caused by a genetic deficiency of acid sphingomyelinase. Nanocarriers may enhance enzyme replacement therapy for type B NPD and perhaps other lysosomal storage disorders. |
