Topography of the interaction of HPr(Ser) kinase with HPr.

Abstract

The phosphocarrier protein, HPr, from Gram-positive organisms and mycoplasmas is a substrate for an ATP-dependent kinase that adds a single phosphate to serine 46. This research focuses on the topography of the interaction of HPr(Ser) kinase with HPr. The study employs an NMR chimera of M. capricolum HPr and the chimeric construct provided a basis for interpreting the results of the activity assays.

Keywords

Amino Acid Sequence, Amino Acid Substitution, Asparagine, Bacterial Proteins, Base Sequence

Article Details

Title: Topography of the interaction of HPr(Ser) kinase with HPr.
Publication Type: Journal Article
Year of Publication: 1998
Authors: Zhu, PP, Herzberg, O, Peterkofsky, A
Journal: Biochemistry
Volume: 37
Issue: 34
Pagination: 11762-70
Date Published: 1998 Aug 25
